

1 Installing our Dyna Saddle Bag Brackets onto your fender rails while still using your detachable mounts.

We offer a specific bracket to be used for this application. It does not have any bungs welded to the mounting flanges. If you have a set of brackets with the bungs welded on, you may either grind off the bungs or return the brackets for the correct set.

The mount flange will replace the washer located on the **outside of the detachable mounts**. From the outside: Bolt, Washer, Bracket Flange, Detachable Mount. You may use your existing hardware or our hardware packaged with the brackets. We suggest you use our #8810A Horizontal bracket to secure your brackets.
